Please amend the abstract filed November 12, 2002 by replacing the Abstract with the following paragraph:

The present invention includes an apparatus and method to insert a small diameter pipe into a borehole while holding a larger diameter pipe. The apparatus includes a table attached to a centralized base which, in turn, provides a telescopic stop tower. The stop tower includes a force transducer that yields a readout when it is abutted by a first wrench when a second wrench secured to the small diameter pipe is turned.
